

HOW TO USE GLITTER KISS AND GILDING POLISH

The techniques are the same for both products but have different looks. Glitter Kiss adds all the glam of glitter without the flaky mess! Gilding polish looks like a pearly coating of metal!

Products:

Glitter Kiss (16 colors available)

Gilding Polish (25 colors available)

Embossing Folders (any will work, but 3D folders are especially nice)

Wooden embellishments

Before using, you must prime the sponge applicator. Pop it out of the lid with two thumbs as you hold the jar securely in two hands. Collect some product on the sponge and pounce it into the sponge either on the inside of the lid itself or on wax paper. Note: You are NOT loading A LOT of product on or into the sponge. (Wash sponge and let dry after done for the day.)

- 1) Emboss a piece of cardstock. If using a 3D embossing folder, be aware that your “sandwich” of plates is different than a traditional embossing folder. Refer to directions for your machine and NEVER force it. If too tight one way and too loose another, use the loose sandwich and add cardboard for shims.
- 2) Load the applicator by pulling the product toward the rim of the jar several times, scraping the edge as though you were trying to get the product off the sponge. When ready to use, the sponge surface should be smooth, with very little product on it and no globs on the sides.

3) Working from side to side, gently glide the applicator across the embossed cardstock grazing the raised portions. Reload the sponge again and again sparingly as soon as it seems nothing is coming off onto the project. It may not look like you got much product applied, but DO NOT try to apply with more force. Instead, turn the cardstock 90 degrees and apply again from a different angle. Repeat until you have come at it from all four directions, catching a different part of the embossing each time you turn the paper. There is no need to wait to add each layer as the product dries very quickly.

4) Cut to desired size, mat on contrasting cardstocks and adhere to card, scrapbook page, mini album cover, decorative box lid, etc. Add words or embellishments as desired.

ADDITIONAL TECHNIQUES:

- 1) Use Glitter Kiss or Gilding Polish to color wood embellishments or die cut cardstock. No need to be gentle. Simply place the item to be colored on a piece of copy paper (trash paper) and pounce until desired coating is achieved. See the word "Happy" in below photo.
- 2) Use a combination of the same gliding light touch technique and the pouncing method to apply through a stencil. Gain practice using a stencil that has fairly large openings and not one that would be considered delicate. Wash stencil immediately.
- 3) Apply to a rubber stamp, then stamp image on cardstock. The use of a stamping platform and several light coats may produce best results. Wash stamp immediately.
- 4) Apply only to the edges of cardstock, much as we do with ink or chalk, for a border effect. See the little frame containing the word "Happy" in the photo below.

5) Try using a layer of Glitter Kiss over the top of a layer of Gilding Polish. See below where we Gilded Ocean Teal first and then Glitter Kissed a little Silver over the top of some of the design.
